The new HayBoss G2 600 Series Automatic Applicator system is now compatible with baler and tractor ISOBUS systems. By running through the baler monitor, the system is more efficient and easier to install and operate. The HayBoss G2 600 Automatic Applicator still retains all its functions such as sensing moisture and tonnage on the go, and adjusts the preservative application rate based on the condition of the hay. This precision gives the operator the exact amount of preservative required to keep the crop in great condition without wasting product. The display in the cab gives the operator complete control and provides information on:

- Moisture content
- Speed of baling (tonnage)
- Volume of preservative used per bale
- Total tons baled

The HayBoss G2 600 Series Automatic Applicator is also compatible with the Bale Indentification System, or Tagger, as well as other add-on accessories to enhance your baling operation.

Electronic control systems are also available for large square balers. Equipped with a high-capacity 110-gallon tank mounted on the rear of the baler, the operator can go almost non-stop.
